PROFESSIONAL SUMMARY

Software engineer with 6+ years building identity, cloud, and enterprise backend systems, including three years hardening authentication infrastructure for a Fortune 500 hospitality company and most recently standing up an internal engineering function from scratch. Backed by a Master's in Cyber Security (NSA CAE-CD) and hands-on experience across AWS, GCP, and Azure. Known for turning ambiguous business requirements into secure, measurable technical wins — including double-digit improvements to guest login and activation rates and rapid recovery of production systems during a security incident.

TECHNICAL SKILLS

Cloud Infrastructure & DevOps: AWS, Google Cloud (GCP), Microsoft Azure, Azure DevOps, Terraform, Docker, Git, GitHub Actions, Heroku

Identity, Access & Security: Okta, Auth0, Apigee X, Akamai, CloudFlare, BurpSuite, Ghidra, IPS Rule Writing, Kali Linux, OWASP ZAP, Pwntools, Wireshark

Core Languages & Backend: Python, Java, Node.js, Go, Dart, JavaScript, TypeScript, C, C++, Bash, PowerShell, GraphQL, Apex (Salesforce)

Front-End & Web Platforms: React, Next.js, Flutter, HTML5, CSS3, Tailwind CSS, WordPress, BigCommerce

Data & Tools: SQL, NoSQL, PostgreSQL, MongoDB, Google Firestore, Google Analytics, Jira, Postman, Confluence

WORK HISTORY

Founding Software Engineer — Fletcher Jones Management Group

Apr 2025 – May 2026

- Built and led the company's first internal software engineering team, transitioning ownership of a six-year Salesforce platform from external contractors and cutting new-engineer ramp-up time from weeks to days through authored runbooks and deployment documentation.
- Enforced technical auditing of external vendor deliverables, establishing a culture of accountability that produced immediate, measurable gains in system stability and code quality.
- Architected CI/CD pipelines via GitHub Actions, automating deployments across environments and giving the executive suite real-time visibility into release status.
- Standardized Salesforce deployment practices across 10 dealership locations, reducing configuration drift and deployment errors between sites.
- Partnered directly with the CTO to map the company's technology landscape and define a multi-year roadmap for enterprise-wide stack consolidation.
- Optimized core Salesforce logic to recover over 5% of platform usage limits, extending the runway of existing architecture without a costly re-platform.
- Directed production release cycles and UAT, maintaining an SLA where hotfixes were typically deployed within hours of identification.

Software Engineer I, Customer Identity Team — MGM Resorts International

Jan 2022 – Apr 2025

- Built and maintained identity management services, authentication pipelines, APIs, and networking components supporting guest account platforms across AWS, Azure, GCP, Okta, and Apigee X.
- Redesigned guest identity flows, driving a **27% increase in login success** and a **25.7% increase in account activation**, while eliminating the top recurring guest-reported errors.
- Led critical restoration efforts during an enterprise-wide security incident, rebuilding core networking and service environments to bring guest-facing systems back online.
- Hardened cloud security by enforcing Apigee X gateways and building deployment templates that standardized request tracking and endpoint protection across services.
- Modernized identity systems to strict OAuth 2.0 compliance, coordinating cross-functional teams through integration changes across a polyglot stack (Java, Node.js, Python, Dart).

- Developed high-performance Dart-based APIs on Google Firestore to power personalized user preferences and targeted marketing offers.
- Automated large-scale account data reconciliation and CPRA compliance request processing, replacing manual data governance work with repeatable scripts.
- Mentored engineers on troubleshooting methodology, testing strategy, and secure development practices.

Webmaster — *Largo Consulting Services, LLC*

Apr 2020 – Jan 2022

- Owned the full lifecycle — design, security, and optimization — of 11 client websites on WordPress and BigCommerce.
- Used Google Analytics and custom dashboards to advise stakeholders on functional and UX improvements, informing site roadmaps.
- Hardened web systems through proactive threat monitoring and custom IPS rule development, maintaining sub-hour resolution on bugs and vulnerabilities.

EDUCATION

New York University — M.S. in Cyber Security (GPA: 3.77)

NSA Center of Academic Excellence in Cyber Defense (CAE-CD) Certified

Rensselaer Polytechnic Institute — B.S. in Information Technology & Web Science

Concentration in Human-Computer Interaction / Cognitive Engineering

PERSONAL R&D AND SYSTEMS PROJECTS

Edibubble — **Flutter / Supabase / Dart**

- Built a cross-platform social networking app in Flutter/Dart with a focus on high-performance mobile and web UI rendering.
- Designed a Supabase (PostgreSQL) backend handling real-time data sync, user authentication, and relational data schemas.

Stick-Champ Engine — **C# / Unity / Network State Logic**

- Architected a 2-player arcade fighting game engine in C# and Unity with deterministic rollback netcode for zero-latency remote multiplayer.
- Engineered frame-accurate state syncing and input-buffer prediction, targeting a Steam release.

Hardware Prototyping & Security Lab — **IoT / Electronics / 3D Printing**

- Assembled and configured a Slim Pwnagotchi for hands-on network auditing and IoT security experimentation.
- Designed custom CAD models and 3D-printed structural components for multi-part hardware assemblies.
